

HOW TO ADD A FORMSVIEWER FORM AS A SNIPPET ON SHAREPOINT O365

A snippet is an HTML representation of a SharePoint component or control such as a navigation bar or a Web Part. By using a Snippet, you can quickly add a FormsViewer – InfoPath form to your SharePoint page or page layout.

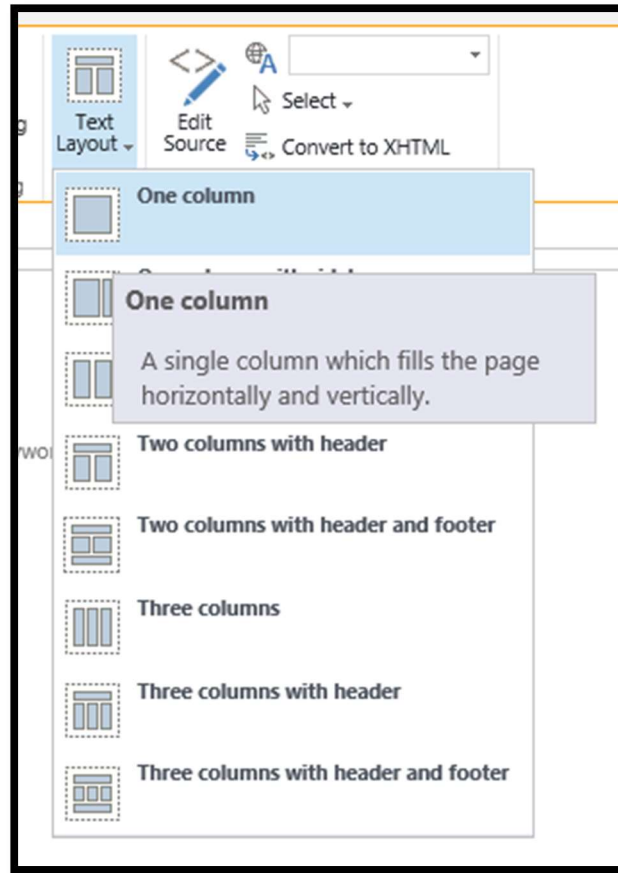

This guide assumes that you already have an InfoPath form uploaded to [FormsViewer](#) on your SharePoint O365 site – we will use the FormsViewer link for this form and display it on your SharePoint page as an HTML snippet.

TO INSERT A SNIPPET

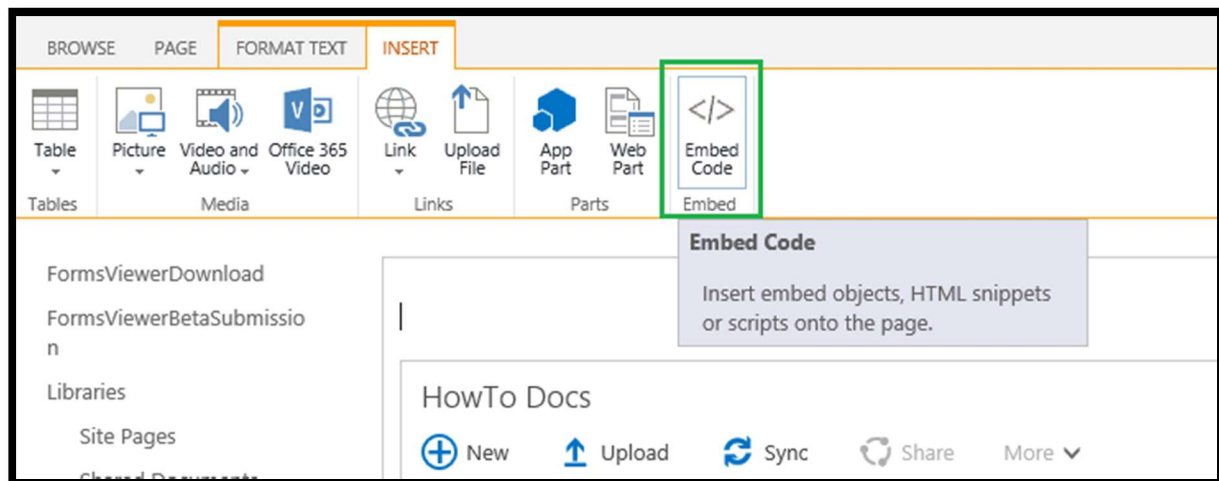

1. Navigate to the page where you desire to display a form as part of the page layout.
2. In the upper-right corner of the page, choose the Settings gear, and then choose **Edit page**.

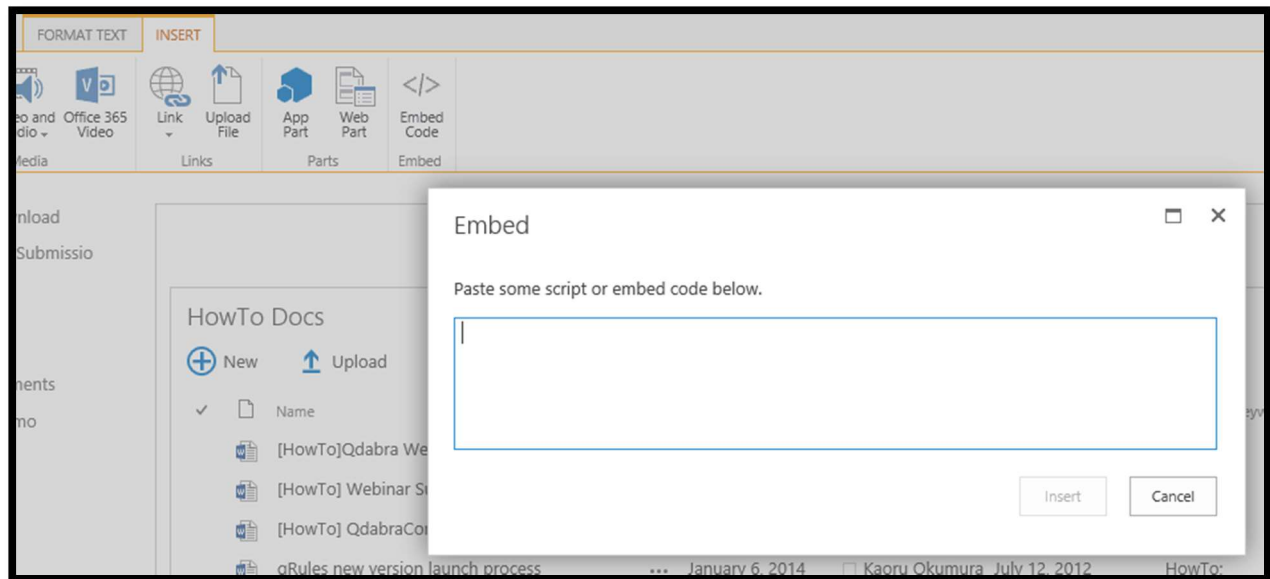

3. (optional) Under Format Text, select a desired **Text Layout**.

4. Click the area where you would like to add the snippet.
5. Under the **Insert** tab, click on **Embed Code**.

This should display the Embed code box section:

6. Copy and paste this HTML **iframe** script into the box:

```
<iframe width="500" height="500" src="FV_template_URL"></iframe>
```

Use the height and width attributes to specify the size of the iframe.

Replace **FV_template_URL** with the desired FormsViewer template URL

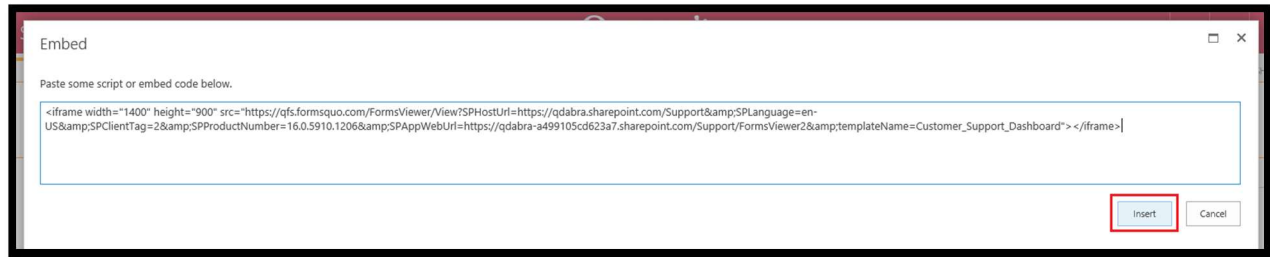

To grab the FormsViewer URL, go to the **FormsViewer Manage Templates** page > locate the desired template > hover over desired the link (under Open Form Link column) > right click > select **Copy link address**.

Your HTML script should look similar to this:

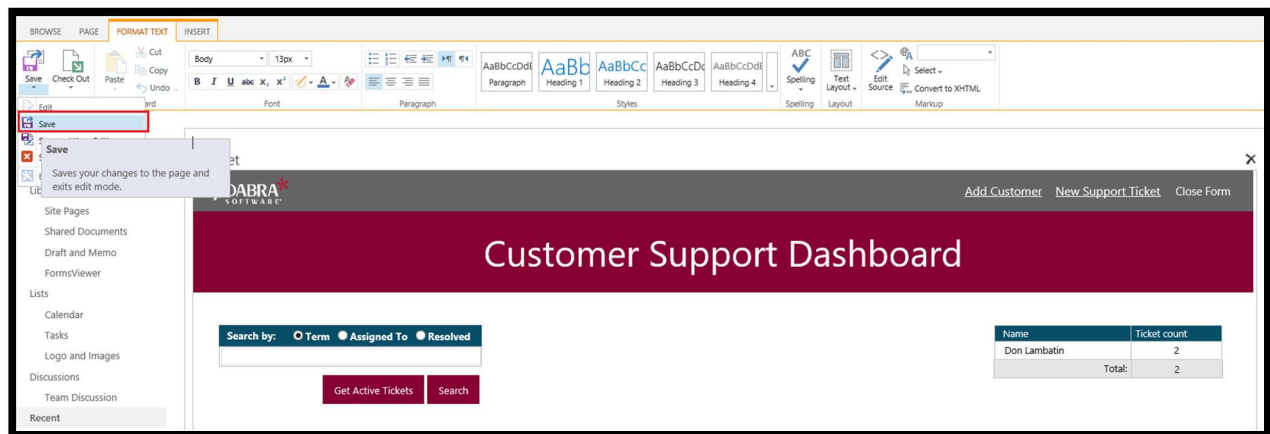

```
<iframe width="1400" height="900" src=
"https://qfs.formsguo.com/FormsViewer/View?SPHostUrl=https://qdabra.sharepoint.c
om/Support&SPLanguage=en-US&SPClientTag=2&SPProductNumber=16.0.5910.
1206&SPAppWebUrl=https://qdabra-a499105cd623a7.sharepoint.com/Support/FormsV
iewer2&templateName=Customer_Support_Dashboard"></iframe>
```

7. Click **Insert**.

8. When done, click the **Save** button located under the Format text tab.

You should now have your form displayed on your page as a snippet!
