

QDABRA DATABASE ACCELERATOR V2.3

How to import xml documents into DBXL

The scenario: You have x number of xml documents that are associated with a certain InfoPath form template (XSN). You want to migrate these documents and the form template into DBXL. This document will tell you how.

1. Install the [Document Deployer tool](#). This will be essential later in the process.
2. Create a document type in DBXL using your XSN form template. See the [Getting Started](#) document for details. Remember that your XSN will need a data connection that submits to the DBXL Document Service.
3. Create the following folder structure in a local drive.

Parent Folder

Folder: <YourDocumentTypeName>

Sub Folder: SampleDocs

<Your xml files here>

4. Place all of your xml documents in the **SampleDocs** folder, as indicated above.
5. Use Document Deployer to import the documents.
 - In Document Deployer UI, switch to the **Import** tab.
 - The Export path will be the Parent Folder (from the folder structure above).
 - Click on the **Load** button and select the document type that was used in the step 3.

The screenshot shows the Document Deployer application window with the 'Import' tab selected. The 'Export path' field contains the text 'C:\Documents and Settings\arunaa\Desktop\ExportDocs' and has a 'Select' button next to it. The 'Configuration' dropdown menu is set to 'Template' and has a 'Load' button next to it. The 'Export' tab is also visible, but the 'Import' tab is the active one.

- Check only the **Documents** checkbox in the **items to import** section.

Items to import:

- ☒ Documents
- ☐ Configuration (Permissions, Database Mapping)
- ☐ Taxonomy
- ☐ Workflow (qForm only)

- Click on **Run**, and then click **OK** in the confirmation dialog.

6. Go to the DBXL Administration Tool (DAT) and click on the **Documents** tab for the document type you imported in step5.

Query Documents

To limit the number of documents shown, enter a starting Doc. ID and the number of documents to show, and then click query. You can then jump forward or backward by the number of shown documents, or click Query All to show all documents. To search for a Document with a specific Ref. ID, type the ID into the field, and then click Query.

Starting Doc. ID: 390 Ref. ID: Range: 20 Previous Next Query Query All

Refresh

Documents Delete Delete All Reshed Reshed All

Doc. ID	Ref. ID	Version #	Name	Author	Description	New
390	5	1	Andy Smith	ASmith	Testing!	Open

Now your xml documents have been imported into DBXL and can be edited and resubmitted via the DBXL web service.
