

Upgrading from Database Accelerator (DBXL) v2.4 to v2.5

If you are a current DBXL v2.4 customer and wish to upgrade to DBXL v2.5, please follow the steps below.

1. Back up your web.config file. This is necessary especially if you have declared any databases or servers used with QueryDB. The file can be used later to restore any settings/configurations.
2. Open SQL Server Management Studio and connect to the server. Backup DBXL's system databases (QdabraDBXL and QdabraUtility). This is a precautionary step, in case the databases need to be restored in the future.
3. Uninstall DBXL V2.4.
4. Install DBXL v2.5 Server Edition.
 - When you reach the SQL tab, make sure to use the same SQL instance and the same SQL databases (QdabraDBXL and QdabraUtility).
 - Also make sure to check the **Use Existing Databases** checkbox.

The screenshot shows the 'SQL Server' tab of the 'Qdabra Database Accelerator v2.5' installer. The window has a title bar and a tabbed interface with tabs for 'Site', 'Log On', 'Document Security', 'Active Directory Service', and 'SQL Server'. The 'SQL Server' tab is active. It contains several configuration fields: 'Server name' is a dropdown menu set to '(LOCAL)\SQLEXPRESS'; 'Authentication' is a dropdown menu set to 'Windows Authentication'; 'User name', 'Password', and 'Confirm password' are empty text boxes; 'Document Database' is a text box containing 'QdabraDBXL' with a checked checkbox 'Use existing databases' to its right; and 'Utility Database' is a text box containing 'QdabraUtility'. At the bottom left, it says 'Trial license expires on 4/20/2011'. At the bottom right, there are three buttons: '< Back', 'Finish', and 'Cancel'.

Qdabra Database Accelerator v2.5

Site | Log On | Document Security | Active Directory Service | **SQL Server**

Server name: (LOCAL)\SQLEXPRESS

Authentication: Windows Authentication

User name:

Password:

Confirm password:

Document Database: QdabraDBXL ☒ Use existing databases

Utility Database: QdabraUtility

Trial license expires on 4/20/2011

< Back Finish Cancel

Once the installer finishes, you can open DAT to verify that your document types and documents were preserved. SharePoint and SQL mappings are also preserved.
