

NET Framework not installed or PIA not Registered

The following error message may display in InfoPath upon opening a template from DAT (DBXL Administration Tool):

The **Show Details** button reveals:

InfoPath cannot open the selected form because of an error in the form's code. The Microsoft .NET Framework 1.1 is not installed on your computer or the InfoPath primary interop assembly (PIA) is not registered. Use Add or Remove Programs in Control Panel to make sure that Microsoft .NET Framework 1.1 is installed or install it using Windows Update, then run Setup again to confirm that .NET Programmability Support is installed, or contact your system administrator.

This error most likely occurs if the .NET framework was installed after InfoPath was. Office does not by default install all required components for InfoPath 2007 to work with managed code.

Below are some ways that may fix this issue:

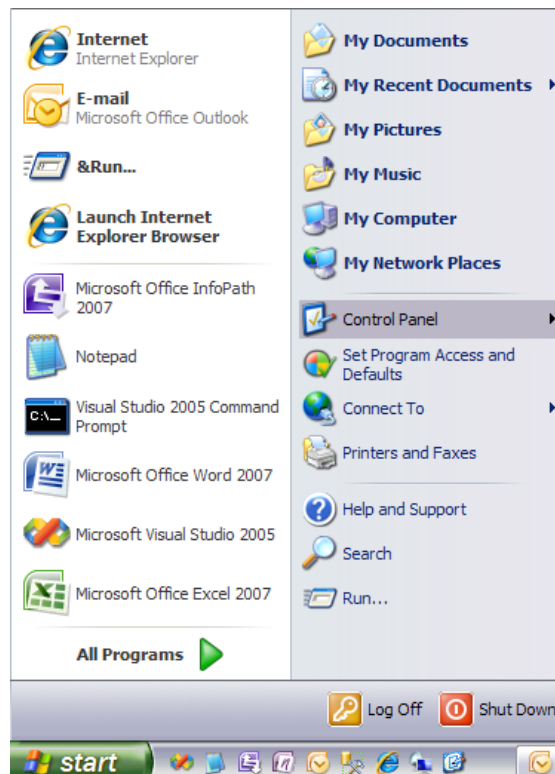

INSTALL PRIMARY INTEROP ASSEMBLIES (PIA)

1. Navigate to the InfoPath **Help** menu and select **Detect and Repair** for InfoPath 2003 or **Office Diagnostics** for InfoPath 2007 to repair your InfoPath installation.
2. Download and install the Primary Interop Assemblies (PIA) for your version of Office:
Office 2003: <http://www.microsoft.com/downloads/details.aspx?familyid=3c9a983a-ac14-4125-8ba0-d36d67e0f4ad&displaylang=en>
Office 2007: <http://www.microsoft.com/downloads/details.aspx?FamilyID=59daebaa-bed4-4282-a28c-b864d8bfa513&DisplayLang=en>
Office 2010: <http://www.microsoft.com/en-us/download/details.aspx?id=3508>
3. Run the InfoPath / Office setup again.

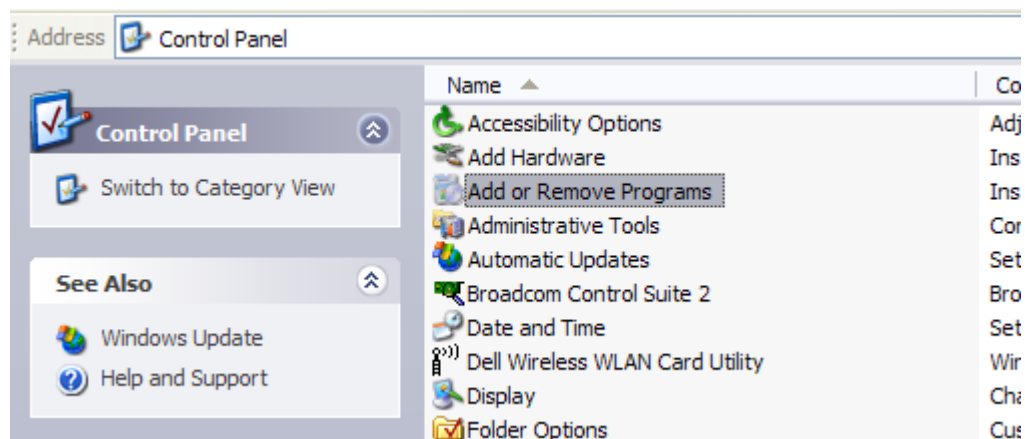

Installing the PIA does not always work. However, the following steps work in many stubborn cases:

INSTALL ALL THE COMPONENTS OF INFOPATH 2007

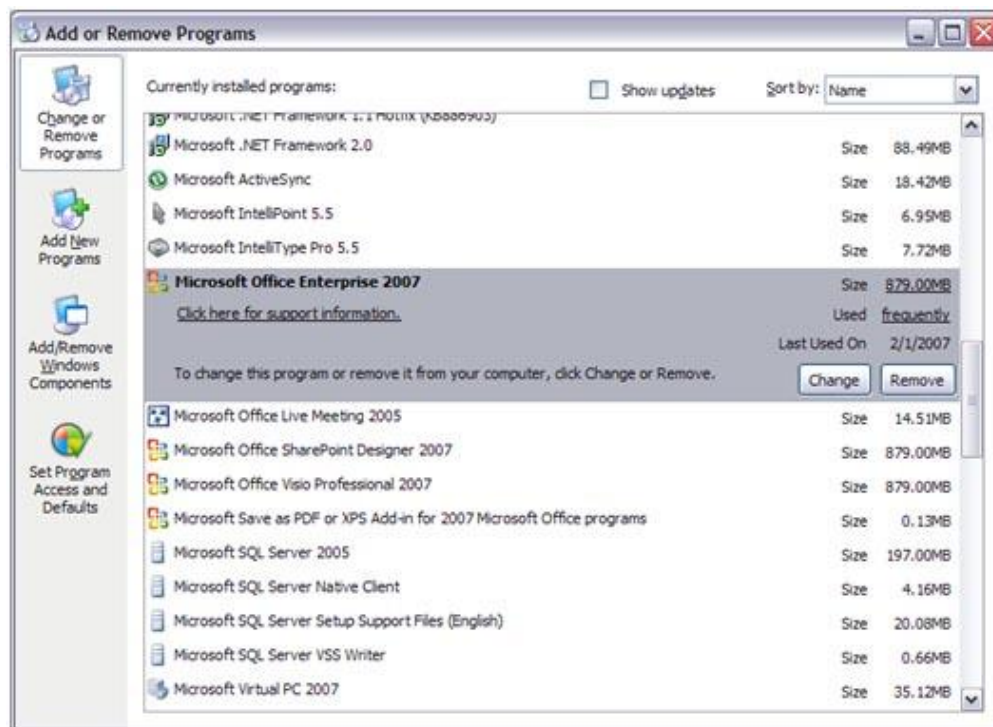

1. Navigate to **Control Panel**:

2. Select **Add or Remove Programs**:

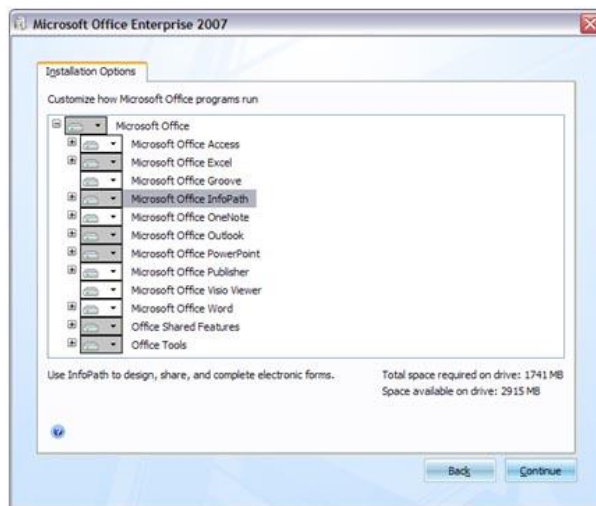

3. Select **Microsoft Office 2007** and click on the **Change** button:

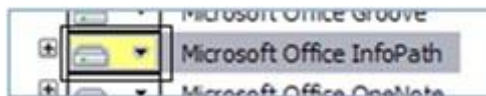

4. Select the **Add or Remove Features** radio button and click the **Continue** button:

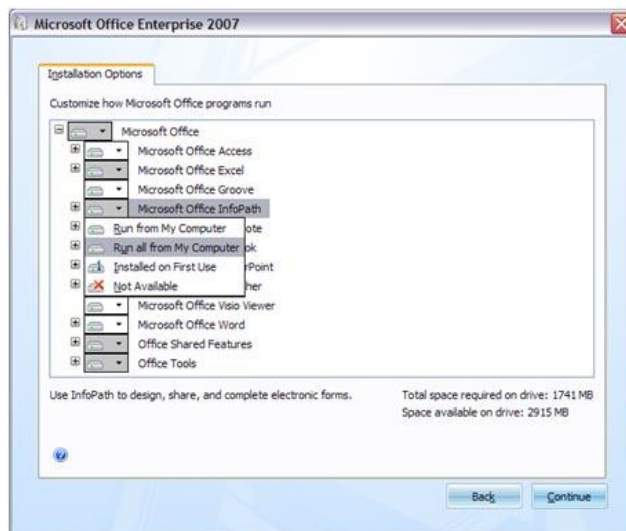

5. Click on the **Microsoft Office InfoPath** group:

6. Click in the box to the left of **Microsoft Office InfoPath** (highlighted in yellow below). Clicking in this area will bring up a popup menu with options.

7. Select the **Run all from My Computer** option and click on **Continue**:

8. Follow the remaining instructions to install all components of InfoPath 2007 on your computer.

NOTE: If you did a network install of Office, you should not be prompted for the original install DVD of Office. If you installed from a DVD you may be prompted for the original install DVD.

Similar steps may be followed should you encounter this issue on Office 2010.
