

QDABRA DATABASE ACCELERATOR V2.3

Database compatibility issues when upgrading to DBXL v2.3

If you are a DBXL v2.2 user previously using SQL Server 2000 and later upgraded to SQL Server 2005, you have to change the database compatibility mode and enable full text before upgrading to DBXL v2.3.

CONFIGURE THE DATABASE COMPATIBILITY MODE

1. Open **Microsoft SQL Server 2005 > SQL Server Management Studio**.
2. Log in and right-click to your database.
3. Select **Properties**.
4. Select **Options** from the list on the left side of the window.
5. Set compatibility level to **SQL Server 2005 (90)**
6. Open **SQL Management Studio**
7. Execute the following script

```
USE QdabraDBXL
```

```
GO
```

```
EXEC sp_fulltext_database 'enable'
```

```
GO
```

8. Then run the DBXL v2.3 installer
