

QDABRA DATABASE ACCELERATOR

How to see previous versions of forms

In order to see previous versions of forms, you'll first need to check the Enable History option in the Database tab in Qdabra's DBXL Administration Tool.

By entering the URL of the DBXL DocHandler

(<http://<servername>/QdabraWebService/documents/<docid>/<docid>.xml>) you can open the latest version of the document for that DocID. But because you have enabled history for this Document Type, you can get the previous versions of this document.

- To get one version before the latest version use the following URL:
<http://<servername>/Qdabrawebservice/Documents/<DocID>v-1/<FormName>.xml>. The URL would be the same as before, other than the text **v-1** added after both occurrences of DocID.
- If you want to get the second to last version of the document, then the URL would be
<http://<servername>/Qdabrawebservice/Documents/<DocID>v-2/<FormName>.xml>
- And so on.

Note that <FormName> can be anything you'd like.

In addition, if you know the specific version number that you seek, you can specify the URL as
<http://<servername:port>/Qdabrawebservice/Documents/<DocID>v<x>/<FormName>.xml> where <x> is the version of the document.
