

How to install Query Builder

Qdabra's QueryBuilder allows you to generate the query strings used in the QueryDB and QuerySharePoint web services.

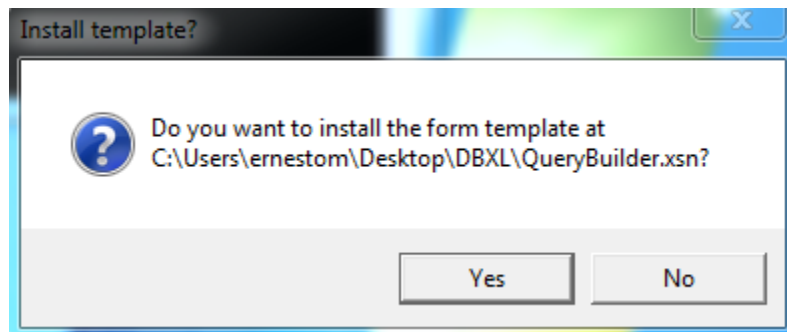

INSTALLATION

To install QueryBuilder, follow the steps below:

1. Download Qdabra's FormsInstaller, available [here](#).
2. Obtain the QueryBuilder XSN. There are two ways to do this:
 - a. From DBXL:
 - i. In Internet Explorer, navigate to <http://<servername>/QdabraWebService/>
 - ii. Right click on the link for **Qdabra Query Builder** and select **Save Target As**.
 - iii. Save the XSN to your local directory.
 - b. From InfoPathDev.com: Navigate to [this page](#), where the latest copy of QueryBuilder is available for download.
3. Now simply drag the QueryBuilder XSN onto the FormsInstaller icon.

4. Click **Yes** in the dialog.

POST-INSTALLATION

After installing Query Builder, open QueryBuilder by:

- Click the **Qdabra Query Builder** link on the default page (<http://<servername>/QdabraWebService/>). Note that the link from the default page will only work if the version installed is the same as the version in DBXL.
- Launch the InfoPath Filler and double click on the Query Builder form, located under Installed Forms.

If you wish to **uninstall** QueryBuilder, drag the QueryBuilder template onto FormInstaller again. Click **No** in the first dialog, and then click **Yes** in this dialog:

You can find this same document on InfoPathDev.com by clicking [here](#).
