

CONFIGURE EMAIL NOTIFICATIONS FOR QDABRA EVENTLOG ENTRIES

When errors occur in DBXL, information is recorded in the Event Viewer of the server where DBXL is installed. The steps in this document will allow the administrator to receive an email notification any time that an error is recorded in the Qdabra logs.

1. Open Notepad and paste the text below.

```
Set oMessage = CreateObject("CDO.Message")
oMessage.Subject = "Errors have been logged in Qdabra eventlog"
oMessage.From = "someone@yourcompany.com"
oMessage.To = "admin@yourcompany.com"
oMessage.TextBody = "Errors have been logged in the Qdabra eventlog"

' Send using a specific smtp host unless you have a predefined configuration
With oMessage.Configuration.Fields

    ' Send using Port = 2
    .Item("http://schemas.microsoft.com/cdo/configuration/sendusing") = 2

    ' Name or IP of Remote SMTP Server
    .Item("http://schemas.microsoft.com/cdo/configuration/smtpserver") =
"smtphost.yourcompany.com"

    ' Server port (typically 25)
    .Item("http://schemas.microsoft.com/cdo/configuration/smtpserverport") = 25

    .Update

End With

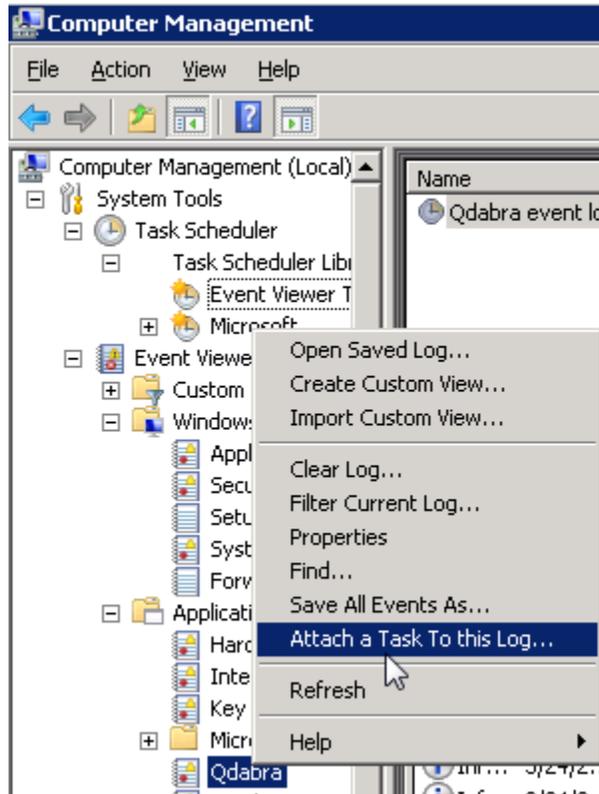

oMessage.Send

' Create an eventlog trigger that will execute this vbscript
'
' eventtriggers /Create /TR "Qdabra Error Notification" /TK
C:\Notifications\SendErrorEmail.vbs /D "Send an email for any DBXL errors" /L Qdabra /T
ERROR /RU ""
```

2. Make any necessary modifications. You should update the **SMTP** server, the **from** email and the **to** email.
3. Save the file, naming it SendErrorEmail.vbs (without a *.txt extension). Make sure to save the file SendErrorEmail.vbs to C:\Notifications\ on the server where DBXL is installed.
4. Open **Computer Management** and navigate to the Event Viewer.

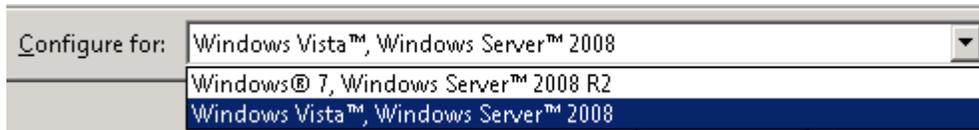

Qdabra DBXL Training: Module 8

5. Navigate to and select the Qdabra event log.
6. Right-click on the log and select **Attach Task to This Log**.

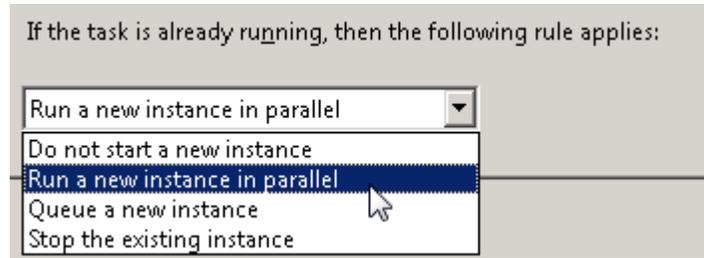

7. In the **Create Basic Task** wizard, type a name and description, then click **Next**.
8. In the **When a Specific Event is Logged** screen click **Next**.
9. In the **Action** window select **Start a program** and click **Next**.
10. Click **Browse**, select C:\Notifications\SendErrorEmail.vbs and click **Next**.
11. Check **Open the Properties dialog for this task when I click Finish**, and click **Finish**.
12. Under **Security options**, click **Change User or Group**.
13. Type in **SYSTEM**, click **Check Names** and click **OK**.
14. In the **Configure for** dropdown, select the correct option.

Qdabra DBXL Training: Module 8

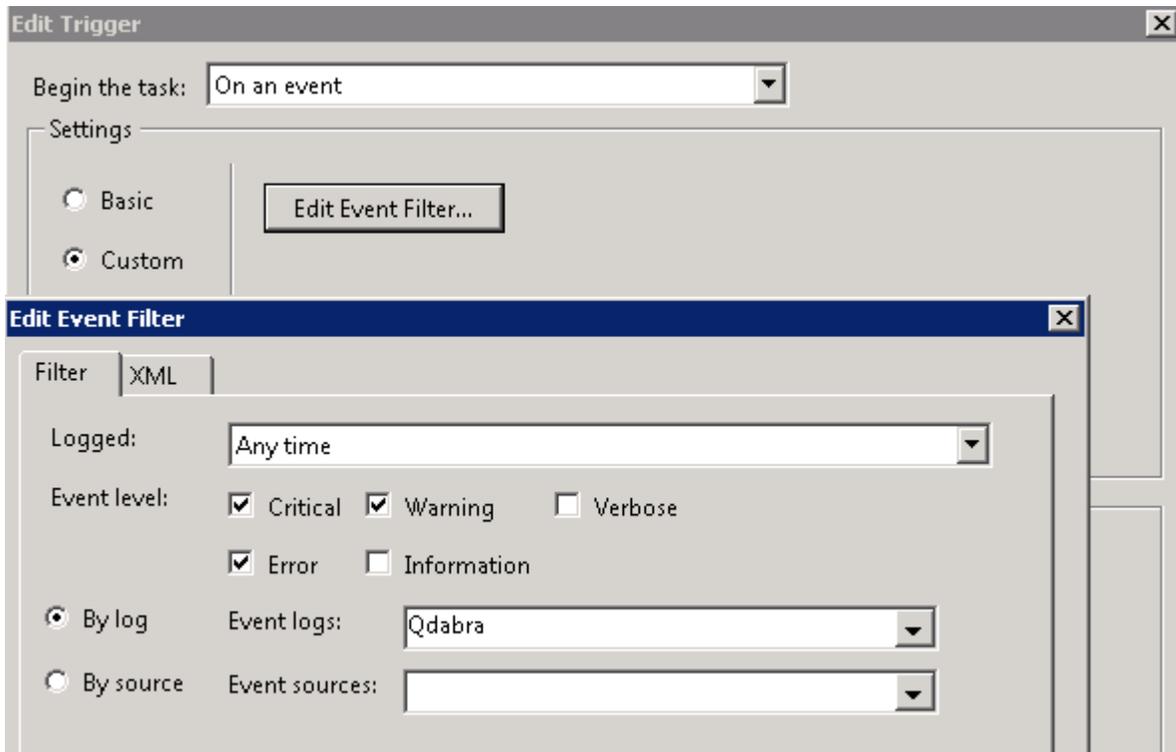

15. In the **Settings** tab, select

16. Click **OK**.

17. In the **Triggers** tab, add a custom trigger such that emails are only sent when a specific Event Level is recorded. In the screenshot below we have selected Critical, Error and Warning. These are the recommended settings.

Qdabra DBXL Training: Module 8

Now, every time there is an error recorded in the event viewer, the email specified in the vbs file will receive an email.

Qdabra Number of events: 1,242				
Level	Date and Time	Source	Event ID	Task C...
 Error	6/13/2012 2:53:50 PM	Database Accelerator	0	None
 Error	6/13/2012 2:45:52 PM	Database Accelerator	0	None
 Error	6/13/2012 2:39:36 PM	Database Accelerator	0	None
 Information	6/13/2012 2:38:41 PM	Database Accelerator	0	None
 Information	6/13/2012 2:38:38 PM	Database Accelerator	2	None
 Information	6/13/2012 2:38:37 PM	Database Accelerator	8	None
 Information	6/13/2012 2:38:36 PM	Database Accelerator	1	None
 Information	6/12/2012 7:32:28 PM	Database Accelerator	4	None
 Information	6/12/2012 6:42:18 PM	Database Accelerator	0	None

Event 0, Database Accelerator

General | Details

An error occurred while setting up a SharePoint collection mapping with the administrative error details have been logged.

SharePoint URL:
<http://fail!>

Exception:
 System.Net.WebException: The remote name could not be resolved: '_vti_bin'
 at System.Net.HttpWebRequest.GetRequestStream(TransportContext& context)
 at System.Net.HttpWebRequest.GetRequestStream()

Log Name: Qdabra
 Source: Database Accelerator Logged: 6/13/2012 2:53:50 PM

This serves as a notification telling the recipient to check the event viewer logs and address the error(s).

Errors have been logged in Qdabra eventlog

Errors have been logged in the Qdabra eventlog

Qdabra DBXL Training: Module 8

In some cases, these event notification emails are treated as junk mails, and therefore appear in the Junk/Spam folder. To remedy this, programs like Microsoft Outlook provides you options to 'whitelist' these messages.
